

Use-Case Flow: Make Milestone Payment

Digital Art Commission & Watermarking Portal

Goal	Complete Milestone Payment
Actor	Client Buyer (primary), Digital Artist and Platform Admin
Main flow	1. Client Buyer selects to pay a milestone on an active commission. 2. The system displays the milestone amount and available payment methods. 3. Client Buyer selects a payment method and, optionally, enters a discount code. 4. If a valid discount code is entered, the system recalculates the amount due. 5. The system invokes the payment-processing module to authorize the payment. 6. Payment is successfully authorized. 7. The system records the milestone as paid and updates the commission status. 8. The system notifies the Digital Artist that payment has been received. 9. If this was the final milestone, the system triggers Unlock Final Asset, generating a signed download URL valid for 60 minutes. 10. Milestone payment process is completed.
Alternate Flow	Payment Declined At Step 5, if payment authorization fails: 5a. System displays a “Payment failed” message and asks the Client Buyer to retry. 5b. Client Buyer may retry with a different payment method or cancel the payment. 5c. If payment fails again (after 2 attempts), the payment attempt is cancelled, the milestone remains unpaid, and the Client Buyer is notified to retry later.
